*Security has become a matter of paramount concern to every organization. Lobbytech offers a Visitor Management Solution for generating visitor IDs with photographs.*

PR9.NET January 14, 2005 - Security has become a matter of paramount concern to every organization. Lobbytech offers a Visitor Management Solution for generating visitor IDs with photographs.

Corporate Lobbies, Government buildings, Schools and many such places have the requirements for creating a temporary visitor badge . Normally, just a sticker is issued as a visitor badge but identifying the person is not possible because of such badges. The visitor register where every visitor fills-in all the details is not very useful because searching through the information is virtually impossible.

Lobbytech + is a simple system which helps in creating a badge with just two steps. Design your own badge. Every organization would like to design a badge as per their own requirement. The safety declarations, logo of the organization etc. can also be placed on the badge.

The badge is shown in the same manner in which it will be printed. One can simply fill in the information at various points and generate badge would print a badge exactly it is seen on the screen. When the visitor leaves the organization he/she can be signed out . This would get you the details about all the visitors in your organization at any given point of time. You can create a daily / monthly report which will be the visitor register. One can search the visits by a specific visitor or even based on his/her organization.

There are many features of Lobbytech + which are useful for power users. One can send an appointment for an expected guest via email to the reception, this mail can be interpreted by Lobbytech + and hence when the visitor arrives the badge can be generated in almost no time lag. Scanning visitor badge is another interesting feature by which the database of photographs of all the visitors can be scanned to compare with a known photographs. Data import from a CSV file, sending of report via email etc. are some of the features of Lobbytech + which makes Lobbytech a very simple yet powerful tool to manage the visitor management.

The software is available for download on various sites and more details about the same can be found at [www.lobbytech.net](http://www.lobbytech.net)
