Small manufacturers face the same challenges as larger manufacturers without the financial depth to resolve the same issues. The result has been that some of the technologies that allow mid-sized and larger manufacturers to achieve efficiencies have been out of reach for the smaller manufacturer until now.

PR9.NET April 06, 2005 - Rocky Smolin, President of Beach Access Software and maker of E-Z-MRP. Smolin emphasizes that E-Z-MRP, "was designed to be used by people who do not have degrees or certification in manufacturing systems. It requires no on-site training or consultation. And it has cut the standard 18-month MRP implementation cycle to as little as 18 days". The E-Z-MRP package includes a full-featured Bill of Materials processor, plus a material planning and tracking module which tracks all sales orders, forecasts, work orders (planned, firm, and released), purchase orders, shortages, raw materials and finished goods inventories. It also records a complete audit trail on all inventory transactions.

Also included is a physical inventory function, a purchase order module for printing purchase orders and a capacity planning module which reports work center loading and activity based on the user's cost labor routings. Priced at \$2995, the E-Z-MRP system is a fraction of the cost of systems with similar power and capabilities. It will run on any Windows-based PC or network, and requires only Access 2000 or Access XP to run. No on-site or remote training is required. A comprehensive user manual with tutorials provides all the required instruction.

For more information, and user testimonials, visit the company's web site: <http://www.e-z-mrp.com>, or call 858-259-4334.
