Brainwave Enterprises, creator of the highly successful napping device "pzizz", announces the immediate availability of version 1.5 of its pzizz player application, along with Energizer and Sleep programs for both Windows and Macintosh.

PR9.NET June 28, 2005 - Seldom do we see new software that is totally unique and original, but pzizz software gives users exactly this; pzizz software achieves things that have never been seen in the genre of personal development.

The pzizz Energizer program is for those days when you haven't had managed to use the Sleep program and are experiencing one of those afternoon lulls. It's designed to give you a powerful nap, relaxing you, de-stressing you and bringing you back revitalized and raring to go.

The pzizz Sleep program is designed to help you switch off, calming your thoughts and allowing you to enjoy hours of restorative sleep, no matter what kind of day you've had.

pzizz nap technology works around a complex algorithm that allows you to choose any length of program between 10/15 and 60 minutes, and the software creates a different program each and every time you use it. pzizz nap technology can create more than 100 billion combinations of programs so you should never hear exactly the same thing twice. You can even export them, and listen to them later on an iPod, MP3 player, CD player or even a Cell phone so you can be guaranteed a good sleep, even on a plane!

You can adjust voice and music volumes separately, to create the perfect sound to suit you. There are voice recordings and algorithm by NLP Master trainer, Michael Breen. Choose between "mono" voice sound files or unique "Aurora" stereo voice sound files,. In the energizer program you can also choose to have vocal suggestions all the way through, just for the intro and outro, or switch off the voice altogether.

pzizz software requires either a PC with Windows XP / XP Pro or an Apple Macintosh computer with OS X 10.3 +.

pzizz software v1.5 (including the Energizer module) costs \$39.95 for a single license.

The Sleep module costs just \$19.95 and requires a previous installation of pzizz software v1.5.
