*H-Sphere Xserver Cluster package features 'plug and host' webhosting infrastructure with PSOFT's leading webhost control panel H-Sphere installed on the security hardened, server optimized platform, Trustix Secure Linux.*

PR9.NET July 27, 2005 - New York , Comodo, through their Web Hosting and server automation division PSOFT, addressed a key need of hosting companies worldwide by delivering the 'Web Hosting Infrastructure in a Box' in the shape of H-Sphere Xserver Cluster packages.

Each Xserver in the clusters features PSOFT's leading webhost control panel H-Sphere installed on the security hardened, server optimized platform, Trustix Secure Linux.

The deployments include up to 3000 user accounts for a single, one off fee and deliver great ROI for clients, with PPC (Price per client) starting from just \$3.66.

Available in 3 main cluster sizes, the premier package is a seven strong Xserver cluster especially targeted at mid to large scale webhosting operations. Each server in the line up is built to a custom specification that directly addresses the needs of a specific hosting requirement - including servers dedicated to control panel, mail, database, dns and web server functionality.

Comodo say the clustering solution reduces the potentially daunting task of expanding, upgrading or migrating a webhosting infrastructure down to a simple 'plug and host' process. Hosts can easily integrate the clusters in parallel with existing hardware, migrate infrastructures with minimal downtime or introduce the H-Sphere control server at the head of their operation to name but three potential scenarios. Start up companies will also benefit from the ability to quickly implement a hosting deployment without the need to deal with multiple vendors.

With each cluster package including free priority support ranging from 1 to 3 months, Igor Seletskiy, Technical Director, believes 'Out of the box and into the Rack' is now a reality for large scale webserver clusters,

"Our long term experience in the webhosting market has taught us that if problems occur, they occur within the first month. We also know that as a cluster size grows, so can the potential pitfalls. By offering free priority support in correlation to the scale of the new cluster, webhosts of all sizes can vouchsafe the success of any Xserver H-Sphere deployment"

The automated purchasing of SSL certificates from within H-Sphere, Seletskiy continues, completes the circle of complete webhost provisioning from a single vendor entity.

"World class hardware, control panel, operating system AND we'll help hosts get it running should they run into problems. Combine this with our highly competitive pricing structure and you have a total clustering solution that is unmatched in the industry"

## About Comodo Inc

Comodo, through its group of Internet security companies, is a leading Certification Authority and global provider of Identity and Trust Assurance services on the Internet. Comodo secures and authenticates online transactions and communications for over 1,000,000 business and millions of consumers. With a global presence in the US, UK, Ukraine, and India, Comodo offers businesses and consumers third-generation solutions for intelligent security and authentication technologies that create trust online. Comodo's technological expertise includes PKI digital certification, integrated authentication infrastructure services, regulatory compliance solutions and digital e-commerce services. The Comodo companies develop technologies that address critical authentication and security needs with proven and reliable solutions such as SSL certificates, Mutual Authentication solutions, PCI compliancy services, Desktop Security, Code signing certificates, identity and vulnerability management solutions.
