Lean Journey to ETO ERP for Lindquist Machine. LMC embarked on a Lean journey so it was essential that the new system supported these initiatives.

PR9.NET August 02, 2005 - Located in Green Bay, Wisconsin, Lindquist Machine Corporation (LMC) builds custom machines for U.S. and international customers. For over 50 years LMC has been solving customers' problems in industries such as food, printing, paper, film, construction, and power tools.

LMC started the implementation process at the beginning of January 2005. After a four-month implementation, LMC went live with Encompix on May 1, 2005.

Although it is still early days Joe Zimmer, CFO, is looking forward to big improvements. "We expect a significant reduction in paperwork and to streamline our office processes. Our goal is to reduce the office lead time from 10 days to 2-3 days. Encompix will also provide us with greater visibility of job status and provide clear assembly instructions to production staff. We are confident that we will meet our objective of ROI within 24 months, hopefully sooner."

In January 2000 LMC embarked on a Lean journey so it was essential that the new ERP system supported these initiatives. "Our goal is to work towards World Class Manufacturing. We want to eliminate 95% of internal transactions and automate 95% of external transactions. Before Encompix we were running at about 25%, with Encompix we expect a big leap forward to 70%," said Zimmer.

According to ETO Institute (www.etoinstitute.org) spokesperson, Thomas R. Cutler, "Encompix continues to take the leadership role in technology solutions for the Engineer-to-Order manufacturing sector."

Encompix (www.encompix.com) has filled the manufacturing software requirements of Engineer-to-Order companies since 1992. The company name reflects the commitment to developing business application solutions that encompass the complex areas of project-based and job-based manufacturing. Encompix provides ETO manufacturers with a competitive advantage by improving bottom line results.
