*Parasoft Corporation has changed the name of Parasoft SOAPtest to Parasoft SOA Test. SOA Test is the most comprehensive tool for testing Service Oriented Architectures. The product has been extended to support the broad range of messaging and transport protocols being used to support Service Oriented Architecture (SOA) implementations and Enterprise Service Bus (ESB).*

PR9.NET August 02, 2005 - Monrovia, CA – Parasoft Corporation, leading provider of automated error prevention solutions, announced today they have changed the name of Parasoft SOAPtest, their industry leading Web services testing product, to Parasoft SOA Test. The product has been extended to support the broad range of messaging and transport protocols being used to support Service Oriented Architecture (SOA) implementations and Enterprise Service Bus (ESB). In addition to services that are implemented with SOAP and WSDL, SOA Test supports JMS, RMI, HTTP, TCP/IP, JDBC and other messaging and transport protocols. SOA Test delivers a proven platform for delivering secure, reliable, compliant services across multiple messaging and transport protocols.

"The name SOA Test more accurately reflects the capabilities of the solution," said Wayne Ariola, Parasoft Vice President of Corporate Development. "When SOAPtest was originally released it primarily supported the testing of Web Services implemented with SOAP and/or WSDL. Today the product supports the many messaging and transport protocols being utilized in Service Oriented Architecture (SOA) and Enterprise Service Bus (ESB) implementations."

###

### About SOA Test

SOA Test is the most comprehensive tool for testing Service Oriented Architectures. Enterprises select Parasoft SOA Test in order to ensure that their SOA implementation is secure, compliant and reliable. Parasoft SOA Test bridges the gap between development and QA by promoting a workflow that shares the same testing assets throughout the development environment. This workflow increases the speed at which services and processes are deployed and significantly reduces the re-work loop between development and QA. By utilizing SOA Test throughout the software development lifecycle, organizations will prevent software errors, improve quality and reliability, and accelerate the time to market for their SOA and ESB initiatives.
