*ICG extends product range with anti-static products.*

PR9.NET August 03, 2005 - Itek Colour Graphics Ltd (ICG®), a leading high-end scanner manufacturer, has extended its range of products for the Photographic and Graphic Art industries with the launch of the company's new series of anti-static products.

ICG's anti-static products dramatically reduce the time spent on removing hairs and dust from negatives, transparencies and images. The ICG® range includes simple effective anti-static cleaning solutions to ensure clean scanner drums and dust free flatbed scanning surfaces. Also included is a sophisticated air gun which ionises the surrounding air in order to dissipate charged particles. The range also includes anti-static gloves, cleaning solutions and anti-static brush film cleaners.

"Our anti-static range brings to our portfolio a line of superior products which work well in tandem with our ICG® drum scanner range." said Ian Smith, ICG® Director, "They equip the user with huge advantages, drastically cutting the time it takes to remove dust from negatives and transparencies and also reducing the amount of digital retouching required."

A greater number of people are beginning to appreciate the drawbacks which can occur as a result of using dust removal software products. These drawbacks include time penalties and the possibility of removing detail. ICG's anti-static range will leave film and scanning surfaces spotlessly clean prior to scanning, resulting in fewer drawbacks and increased time savings.

ICG's anti-static products are available from the company's web site [www.icg.ltd.uk](http://www.icg.ltd.uk) or by contacting ICG® Sales on +44 (0)117 980 5978.

## **About Itek Colour Graphics Ltd (ICG)**

ICG® operates autonomously on an international scale through a network of specialist graphic art dealers and distributors. Its major international markets are North America, Western Europe and the Asia Pacific region.

ICG® designs, manufactures and markets a range of pre-press equipment, which it supports with training, application and maintenance services. The company's flagship product is the ICG® Drum Scanner.

The international headquarters is situated in its own purpose built building in Bristol, England, approximately 100 miles west of Heathrow Airport. The company only employs specialist staff with high levels of experience in dealing with colour capture and imaging.

Twice in its history the company's innovations have been recognised by the prestigious Queen's Award to Industry for Technological Achievement, most recently in 1997 for its novel vertical drum scanning products.
