Multitask Graphics has launched their eagerly anticipated, redesigned website.

PR9.NET September 13, 2005 - Twinsburg, Ohio -- Multitask Graphics has launched their eagerly anticipated, redesigned website. The site features many new areas including an expanded website gallery, detailed overviews of their web development services and user-friendly website navigation. All of these elements are enhanced by a clean and professional website presentation.

"I wanted to design the website in a simple manner. I feel it is important to have an organized, efficiently-mapped website in order for it to be successful." said Project Director Shaun Culbertson.

Another unique feature of the new Multitask Graphics website is their new web statistics tracking program, "MTG Tracking". On the home page of the Multitask Graphics website there is a client login area. From that point, clients are able to access a variety of information specific to their website. This exciting new web statistics tracking system presents valuable visitor data in both graphic and text formats.

The new website is a collaborative effort of the entire Multitask Graphics team, and represents the continued growth they have experienced over the past few years. With an improved company website, a custom visitor web statistics tracking tool written specifically for clients, and an experienced and creative web development staff, the future looks bright for the growing web design firm.
