Novosoft LLC has released new version of password manager "Handy Password". Renewed Graphical user interface and increased performance make this program still more convenient and more pleasant. But the most significant news - Handy Password 3.3 is provided for feedback simpliciter.

PR9.NET September 14, 2005 - Now if you have a problem with the program using, you don't need to send us a letter or call us. Handy Password 3.3 report about program errors to our specialists and they'll send to you an e-mail with recommendation and will help you with the first stage of using of Handy Password 3.3. This function allows using Handy Password more effectively. It saves your time and efforts that you can spend on more useful and important things.

Also Handy Password 3.3 feature of fields' auto filling makes the most of user's time. It takes about one minute to fill in a usual online-form. If you use Handy Password 3.3 it takes only five or seven seconds. By a single mouse click, a user fills the most general information fields: name, e-mail, phone and so forth. And then by a single mouse click - nickname and password fields. Using Handy Password 3.3 each employee can save about one hour of his working time per week and spend this hour more efficiently for a common cause.

Handy Password 3.3 saves site and email logins and stores several forms of information: bank account details, login information, PIN codes, credit card numbers, personal and other information and fills the corresponding web-forms on the corresponding sites, allowing one to login automatically.

Starting the program the user inputs only one password which opens the access to all other passwords and logins only to him. This way of working with the Internet favorably differs from using Auto-save function of Internet Explorer, and moreover, from an old-fashioned method of writing passwords in paper notebooks or on stickers. All the data you save in Handy Password 3.3 are protected by 128-bit encryption.
