A short press release regarding the launch of a new HTM2030 ultrasonic benchtop cleaner for use in the dentistry field

PR9.NET September 15, 2005 - Do you want ultraclean Dental Instruments?

Cardiff based manufacturing company, Ultrawave Ltd, have just launched a new HTM2030 compliant validated benchtop ultrasonic cleaner for use in the dental sector.

The unit has undergone a complete revamp and is now housed in a wipe clean plastic outer shell with the digital user interface built into the lid. The unit benefits from a huge range of features including fluid level sensor, locking lid and a fully programmable user interface.

The user interface can be programmed with details of the surgery and all the users meaning after each cycle is run the validation printout will include these details along with whether each stage of the clean was carried out successfully. This information also includes the water temperature, cycle time and what time it was run making all the vital aspect of the cycle easily traceable.

This is of crucial importance with the stringent legislations that are now in place regarding reusable instrument decontamination. Ultrawave are the only company on the market to offer in-built validation as standard on their units and with the new design these units are perfectly suited to the modern surgery environment.

We have also developed a new method of dosing for these units. The detergent required comes in sachets which contain the exact amount of detergent to make the optimum cleaning solution. These sachets dissolve in water making the dosing procedure fast, efficient and easy.

Dave Avery, Marketing Manager at Ultrawave, says "We have put a lot of development into these units in order to make them HTM2030 compliant, but the reports we have been receiving back from sites where the units have already been installed are very positive meaning it has all been worthwhile."

###

About Ultrawave Ltd

Ultrawave are a manufacturing company who produce a full range of ultrasonic cleaning units for use in the medical and industrial market. Our newest product is the first ultrasonic unit to include in built validation and locking lid in compliance with UK medical document HTM2030. Tank sizes range from 1 litre to 1000litres. We also provide accessories and a comprehensive range of detergents for use with all of our units.
