*Datacraft Solutions e-Kanban system Profiled by TR Cutler in Metalworking Production & Purchasing*

PR9.NET September 23, 2005 - The September issue of Metalworking Production & Purchasing includes a feature e-kanban article authored by North America's leading manufacturing journalist, Thomas R. Cutler ([www.trcutlerinc.com](http://www.trcutlerinc.com)). The Canadian publication can be located at [www.metalworkingcanada.com](http://www.metalworkingcanada.com).

Cutler provided a detailed understand of how e-kanban solutions are key to an effective lean manufacturing initiative and provides a case study that feature Datacraft Solutions. According to Matthew Marotta, founder of Datacraft Solutions, "We do not charge for upgrades to the system as we learn about new best practices that clients ask us to incorporate. Before Datacraft incorporates the request, it is reviewed buy a lean advisory board to validate the value of the best practices and the value added impact upon our partner community. Once it is passed, they develop, test, and implement."

The hosted solution provides the customer with their own set of servers which are maintained offsite by and outsourced set of administrators. All of the administration fees, equipment, support teams and software updates are all included in the monthly service fee which is less then the cost of hiring an internal system administrator.

The value of an ASP is that manufacturers can buy "by the drink", low risk, and a see a rapid ROI. Only internet access is required.

The non-ASP option leaves manufacturers investing a large sum into the communication network, IT personnel, IT training, application servers, consulting for system modification, along with all the hidden costs that come with it. The only disadvantage of using an ASP is the client never owns the system (application), only their own data. This concern tends to be the issue of IT since they want to control all phases of the e-kanban operation. The cost of the control is wasteful and completely antithetical to a Lean Initiative.

While some ERP systems QAD, Factory Logic, and Supply Works have some e-kanban functionality is not their core focus, so manufacturers are purchasing the ERP system at a significant price tag including all the prices increases (and upgrade charges). From the perspective of Lean functionality and immediate ROI the cost cannot be justified, unless there is a plan for a manufacturer to replace the ERP system.
