QArea, the leading developer and tester of applications for PDA's and smart phones also being the originator of the pioneering BugHuntress Test Suite for automated PDA applications testing, announces starting of its Knights J2ME game porting for variety of mobile devices

PR9.NET October 12, 2005 - QArea announces ending of testing of its Knights J2ME game and starting porting it for variety of mobile devices

The Knights J2ME game will be available for Nokia Series 40 and 60; Siemens Series 55 and 65; SonyEricsson T610, 630, Z600; Motorola V Series; Samsung and Alcatel in the nearest future.

Knights is a unique knights tournament simulator for mobile phones which is quite uncomplicated, yet incorporates tactic and strategic planning elements.

The game parameters can be set via menu. Thus, the strategic core of the game is implemented.

The game goal is to beat the Champion.

The game scenario stipulates 4 successive tournament rounds. During the first round the four Houses fight, during the second one – the three Houses, during the second one – the two Houses, and during the forth one – you fight the Champion. Each House has its Leader and members. The player can move from a round to the successive one by beating the House Leader. By beating a House member the player can improve their fighting capabilities. The fighting is won by beating the Champion or failed after a set number of losses.

The tactics is implemented in a fighting tournament itself. The player can accelerate their Knight yet detriment of hitting accuracy. If both Knights have vitality points left the tournament goes on. The point of this phase is to set the fighting characteristics in the most efficient way.

The score is earned after the following formula: total vitality points taken away from the opponents / tournaments * rounds (4).
