*Email-to-phone technology is to become a communications standard.*

PR9.NET October 31, 2005 - Emails have become the life and blood of all kinds of personal and business communication. For example, there are no means other than emails through which an executive sitting at the 12th floor in an office is able to send an instant 'long' message to his/her colleague at the 4th floor. The figures that show the number of emails that are being used for communication in all the big and small business organizations are staggering.

According to a recent survey (Clear Content, 2005) conducted by Clear Context on email usage, the number of email users is increasing by millions everyday. More than 60% of those people receive maximum business mails on their accounts that range from 2 to 10. POP and Webmail accounts are used for checking and sending personal mails. As far as business mails are concerned, exchange-based mails are utilized the most.

Keeping a track of various mail accounts and the messages in them becomes very time consuming and monotonous. Email-to-phone services are making a buzz in the market. They keep you connected to the world wherever you go. You will have all the important information, as you would know about the latest developments in your personal life, or the work-front.

The users can receive all kinds of news, reminders, and alerts with the help of email-to-phone services. They are interactive voice messages that convert the text of the emails received by a user into human voice messages and deliver them to the phone number specified by the user. The user, in turn, can send a reply by recording a message on the phone that later gets converted into text email.

Email2phone.net is a leading email-to-phone service provider (<http://www.email2phone.net>). The services provide powerful online interface with high-quality and clear human voice messages, which can be availed by anyone who needs information round-the-clock. For example, anyone who is interested in the stock exchange needs to receive real time data for stocks. In fact, one can set a limit to the stocks one is interested in and the information can be received instantly, by the email-to-phone services, in case of price fluctuations.

Small and big business owners can also maintain repeated contact with visitors and remain updated on their work by signing up with email2phone.net. The service can be an excellent way for working professionals like sales executives, consultants, managers, and others, to stay connected to their work even if they are not in their office. Big organizations can become more customer-centric with the help of the email-to-phone services. They can promptly act on the feedback and grievances received from them.

Large volumes of work-related, or personal emails can be organized with the help of the email-to-phone services offered by email2phone.net. There is a unique feature where you can set up flexible filters that allow only select emails like, mails from your family members, boss, business partner, and others, to be received by the user. As soon as someone sends you a mail, you'll receive an alert and you can get back to that person in no time.

Stay connected wherever you are. Sign-up with email2phone.net and see the difference.
