*Cyberscience Corporation, a leading provider of reporting and business intelligence (BI) solutions, today announced the general availability of Enterprise Cyberquery (eCQ) for SSA Global applications including SSA PRMS, BPCS, Baan, and ERP LN. Cyberscience plans to unveil a solution for additional SSA Global applications including Masterpiece and Infinium in the near future.*

PR9.NET November 11, 2005 - Cyberscience also announced it would extend the popular eCQ Test Drive to the newly supported SSA applications. The eCQ Test Drive enables interested companies to test Enterprise Cyberquery in their internal environment for 30 days without risk. At SSAU this year in Atlanta, over 50 Baan and other SSA application users requested the Test Drive offer.

US specialty foods manufacturer, Reily Foods states that Enterprise Cyberquery has been successful in leveraging its SSA Global PRMS/DB2 environment. According to IT Director John Smith, "Before eCQ, we struggled to find a practical solution for our information needs. Our goal was to maintain only one source of data, the PRMS database on the AS/400, while providing a feature-rich reporting environment to our users. When we saw eCQ at SSAU, we decided to take a Test Drive. The team at Cyberscience imported the data dictionary from PRMS and recreated some of our mission-critical reports in only 3 days! Within a week, we were updating our Cyberquery data dictionary and building new analytical reports using eCQ. We have been delighted by the speed at which we are now able to develop new reports driven by source data from our AS/400 DB2 database."

When asked what is driving eCQ's success in the SSA Global market, Cyberscience EVP Nigel Brownjohn stated, "Cyberscience is replacing the older reporting and BI tools traditionally made available to SSA users with powerful, easy-to-use solutions delivering 10 to 20 times the performance offered by typical competitors. Through our no risk eCQ Test Drive, SSA users are able to experience the benefit of such a powerful solution, on their own systems, and see tangible results in hours, not the weeks or months typically associated with new BI/Reporting solutions."
