Hundreds of information security professionals and business leaders came together in what was presented as "Canada's Leading Information Security Conference and Tradeshow".*

PR9.NET November 17, 2005 - Westcoast Security Forum 2005 – We are pleased to announce that Sam Huang, Gennux President and CTO was the Dinner Keynote speaker at the 8th Annual Westcoast Security Forum which was held in Vancouver, B.C. on November 14th, 2005. Hundreds of information security professionals and business leaders came together in what was presented as "Canada's Leading Information Security Conference and Tradeshow".

The focus of the Forum was to examine "Identity Management and Other Essential Security Issues" in today's electronic world. Since Gennux's eW@LL MAIL is a unique e-messaging firewall which validates the authenticity of the email sender rather than scanning each message for unwanted content, the conference organizers were pleased to provide Sam Huang with an opportunity to address the participants as the dinner Keynote speaker.

Although the treat to the security of North American communications network may seem of prime importance, the economies of such markets as Europe, China and India are requiring a world wide solution for safe, secure messaging. eW@LL MAIL was heralded as a global solution since it operates in all of the world's languages, provides total security for the messages and attachments and enables the end user's to have one of the highest level of user satisfaction.

Mr. Huang's recent involvement in the Taiwan and Chinese markets enabled him to bring an Asian perspective to the Security Forum which emphasized a growing need to address a global solution rather than just an "English speaking solution".

## **About Gennux Microsystems Corp.**

Founded in Canada, Gennux, produced and released the eW@LL Solution in response to the demand for a Globally Acceptable set of tools to manage Unwanted Electronic Messages (Spam) for Governments, Telecommunications Service Providers, ISPs, ASP's business and the public. Gennux's vision and mission is to eliminate this menace to our electronic society with the deployment of the eW@LL solution. To date, the success of this objective has surpassed all business forecasts. Our Customers and Partner Companies will soon be present in every city in every country of the world.
