SplineTech JavaScript HTML Debugger (from Spline Technologies Corp) enables web developers who have been challenged with resolving JavaScript errors to easily edit and debug JavaScript and VBScript inside HTML pages -- without the need for inserting additional lines of code to handle the debugging process.

PR9.NET November 25, 2005 - Spline Technologies Corporation has released a unique web development tool -- SplineTech JavaScript HTML Debugger -- that enables web developers who have been challenged with resolving JavaScript errors to easily edit and debug JavaScript and VBScript inside HTML pages -- without the need for inserting additional lines of code to handle the debugging process. Client-side JavaScript, JScript and VBScript debugging languages are fully supported for simple and complex HTML and DHTML debugging scenarios.

Aside from a vast array of features, SplineTech packages step-by-step JavaScript debugging tutorials and functional multimedia demonstration with its software, to help JavaScript developers get up and running quickly.

Starting at \$50 for a single-user license, SplineTech JavaScript HTML Debugger offers several key features to address the most common web development issues:

- Advanced form debugging for Javascript form validation - Programmers can cause order forms to validate in clients' browser windows before they are submitted.
- JavaScript pop-up debugging
- Debug DHTML menus and JavaScript menus
- Debug JavaScript and VBScript events: Debug JavaScript Pop-ups, onclick, onmouseover, onfocus and any other event.
- Debug DHTML behavior
- Debug client-side JavaScript controls: Debug calendars and any other control
- Multi-Functional VBScript and JavaScript script editor (for HTML)
- Full Support for native VBScript and JavaScript syntax (color-coded)
- Explicit JavaScript runtime error information
- Execution line highlighting: Display the current line of the code to be executed.

Without requiring any manual configuration, network configuration or attaching-to process, SplineTech JavaScript HTML Debugger runs on the Windows 2000/2003/XP platforms with Microsoft Internet Explorer 6.0 or better.

SplineTech JavaScript HTML Debugger is available for purchase at http://www.RemoteDebugger.com/javascript_debugger/javascript_debugger.asp

Lifetime expert priority support (including phone support), volume licensing discounts and site licenses are also available.

###
