Plastic Injection Molding Firm Announces new plastic CD/DVD packaging sleeve is now user friendly, problem-free and provides the ultimate in protection.

PR9.NET December 02, 2005 - Since the very first CD was put in a plastic case, CD cases have come with their own set of annoying and costly problems. The case can crack or break during shipping, and if it does make it to its destination, it can't be easily opened. When opened, the disk can fall out or it can get stuck on that annoying little "button," leading one to believe it will surely break before it can be removed!

With a major design breakthrough, plastic injection molding services firm, AB Plastech, has put an end to typical CD case problems with innovative CD packaging sleeves. Made of soft, but durable plastic, these light, compact CD cases are crack-resistant. They offer optimum protection from the hazards of shipping and handling. They are easy to open, allow for fast removal of the disk, and fit perfectly in a standard CD rack for storage.

Media producers can customize the CD sleeve with an embossed logo and choice of colors in solid or translucent shades. And a brochure or note liner can be easily accommodated inside.

The AB Plastech CD sleeve also saves money. No more heavy, protective packaging required to ensure the product arrives safely. Lighter packaging means less shipping charges. Less breakage means less costly product replacements and customer disappointments.

For more information on, or to order a free sample of this revolutionary product, please visit our website, <http://www.abplastech.com/sm/rapid-injection-molding.html>

Or you can call us @ 1-450-661-3096, or email us @ info@abplastech.com

AB Plastech has been providing high-end plastic injection molding services for manufacturing clients across North America and into Mexico for two decades. Services include mold making, custom-molded plastic products in all types of plastics from basic resins to high-grade engineering plastics, and hot stamping. Production runs are consistent and true, from the first piece to the last—even if the pieces are complex and intricate, and the run is a million or more.
