

# Everything You Always Wanted to Know About Spyware But Were Afraid to Ask

Powertec Computers, December 19, 2005

URL: <http://www.pr9.net/comp/edu/3292december.html>

*Supportcave.com is now launching a new forum where you can ask questions like these and discuss subjects related to computer security.*

PR9.NET December 19, 2005 - Most Internet users encounter security related problems sooner and later, and not all of us are fortunate enough to have a family member or co-worker standing by to guide us through any obstacles. This is why Supportcave has created a new forum that welcomes everyone in need of security and Spyware help. Regardless of your own level of expertise, you will most likely find a solution to your problems by posting your thoughts and questions in the forum.

The new forum is open to all interested parties. You can view the discussions and read the articles about Spyware help without registering. Registering and joining the forum is completely free and after the registration you will be able to ask questions, be offered personal Spyware help, discuss current events and keep yourself more updated regarding Spyware help and Internet security. You can also send private messages to other registered members, e.g. when you are in need of Spyware help and wish to discuss the details more privately.

The objective of the new forum is to provide a place where Internet users can gather and help each other out. Supportcave.com is also offering an "Ask the Tech" category where you can post questions directly to our support staff. Spyware, Adware and Viruses are problems that affect all Internet users and the best way of combating these problems is to help each other out. Every time one single computer becomes infected with malicious software, such as a virus, it poses a threat to other computers. If we can lower the amount of infected computers by keeping each other informed, discussing Spyware threats and trends, offering Spyware help, aiding beginners that are choosing and installing Anti Spyware programs etcetera, we will all gain from it since it will make the Internet a safer place.

New types of Spyware, Adware and Viruses are constantly created by dishonest programmers and deceitful organizations and we need to stay alert since these programs harvest personal information, invade our privacy and use information from our computers for fraudulent purposes. In the most severe cases, information gathered via Spyware has been used for identity theft and computer users have found their bank accounts emptied or credit cards maxed out by swindlers.

The forum is not only a place where you will find Spyware help; you can also join the ongoing discussions regarding subjects such as spam news, computer software news, web site hosting, identity theft, firewalls and peer-2-peer file sharing. The forum is open for all types of platforms and has special discussion groups for Windows 95/98/ME, Windows NT/2000/XP, Apple Macintosh, UNIX/Linux, DOS/PDA and portables.

You will find the forum at [help.supportcave.com](http://help.supportcave.com).
