For frequent users, paying for standard long-distance services can easily run hundreds of dollars per month. With the breakthrough of VOIP, companies can cut costs by significantly reducing phone and other expenses. PBXEQ supplies the widest array of low-cost, high-quality VOIP supplies and asterisk-compatible pc cards on the market today.

PR9.NET January 13, 2006 - Canton, MI - For any kind of business, savings means added profit. PBXEQ can help businesses cut long-distance and other operational costs sharply by providing the necessary hardware for VOIP. VOIP uses a single network for both voice and data that eliminates the need for an independent network dedicated to voice while extending the utility of the existing data network. It simplifies network administration by standardizing equipment and centralizing control, which in turn incorporates support staff. Moving, adding, and changing are typically far easier and cost-effective. VOIP also simplifies the implementation of new services. End users can build advanced but affordable telephony systems according to the demands of their businesses with hardware available in PBXEQ. For businesses that need to compile calls from different places or communicate with remote offices and telecommuters, the ability to extend features/functionality, bypass long-distance circuits, and make use of an already paid-for data connection can generate significant return on investment.

PBXEQ offers business owners an expansive list of asterisk compatible hardware and IP enabled phones at the lowest prices. People who are looking to setup their own phone network will surely find what they need at PBXEQ.
