Another book from the critically acclaimed "Learning Mathematics with the Abacus" series is launched together with a newly designed web site.

PR9.NET March 28, 2006 - Kuala Lumpur, MALAYSIA – The much sought-after continuation of the 'Learning Mathematics with the Abacus Year 1' books is finally released for worldwide distribution. Mathabacus.com has just launched the 'Learning Mathematics with the Abacus Year 2' textbook on its web site.

"Since we've been online in June 2005, Mathabacus.com has really been successful with customers ordering from USA, Canada, UK, Australia, India, and Malaysia. Before this our market was only in Malaysia since many schools have adopted our books as major reference for abacus learning in math classes throughout the country," says Sheikh Faisal, the author and owner of Mathabacus.com.

The Ministry of Education of Malaysia has made learning Mathematics with the abacus compulsory in all public schools in Malaysia since 2005. About one million pupils nationwide are already using the abacus in their Mathematics classes. Tens of thousands of pupils are already using these books, highly recommended by the Director General of Education, Ministry of Education, Malaysia himself, as well as curriculum specialists, mental arithmetic tutors and academicians nationwide.

"It is a trend in the recent years that many Asian countries have started to look back at the effectiveness of the abacus in math learning and many parents elsewhere do not want their kids to be left even further behind their Asian peers. That's why Mathabacus.com is very popular in such a short period of time among concerned parents particularly in the United States," says Faisal, who has an instructional designing background.

Learning Mathematics with the Abacus is a set of books that guides kids as young as 4 or 5 year-olds, to acquire mathematical skills and concepts using the abacus and adopting the problem-solving approach towards mastering Mathematics. The integration of the abacus into the math curriculum is cleverly done that makes it a seamless math learning package. The step-by-step instructions are also easy to understand even for kids themselves.

In 'Learning Mathematics with the Abacus Year 2', the same concept is expanded to addition and subtraction with numbers up to 1000. The concept of multiplication and division and how to represent them on the abacus are also introduced. Sample pages of this new book are available for download at the newly-designed web site.

The 'Learning Mathematics with the Abacus Year 2' comes in two versions: a hard copy and a downloadable e-book. Purchases can be made online at Mathabacus.com.
