Shows how domain name auctions may determine the popularity of the new .eu extension and how businesses may buy these new domain names at a reasonable cost before prices rise.

PR9.NET April 13, 2006 - United Kingdom - Can any domain name extension top the world-wide popularity of .com? With over 1.5 million names already registered in one week, .eu might just be the one to give .com some competition.

The most popular domain names are either one word, a few letters or a catchy brandable name. Browse some of the popular internet auction sites and you will see that these are the ones that tend to bring in the higher dollar amounts, sometimes in the 5 and 6 figure ranges. This can usually tell you what a name is worth though time and an end-users (developers) ideas can change that. For someone wanting to buy a name for a future investment, auctions are a great way to find some gems as owners are looking for quick sales.

For example, on Ebay's co.uk site, you will currently find some one word .eu domain names at a very reasonable starting bid price. Are you a lawyer looking for a good legal domain name? If so you may want to bid on counsels.eu which could also be used for a credit company. If you are interested in a match-making site then elove.eu may be for you. Currently starting or want to promote an advertising business? Then advertising.eu or advertises.eu is what you are looking for and they are both up for auction.

These are the first .eu names to be offered to the public and we wait to see who will profit from snatching them up. My advice? Don't wait until it's too late, grab these premier one word domain names while you can as soon they will be gone and only offered at the astronomical prices of the .com's.
