WinQuota LLC announces release of version 3.0 of WinQuota, real-time disk quota management utility for all kinds of Windows servers. Enhanced with variety of new features, notification scripts and SDK, it brings new scope and high usability.

PR9.NET June 30, 2006 - Minsk, Belarus – WinQuota LLC announces the release of 3.0 version of WinQuota, the real-time disk quota management utility for Windows. This version brings new features as SNMP monitoring, full Web based administration, new user interface, and support of 3rd party software execution if soft quota limitations exceed.

WinQuota is a fully automatic and real-time disk quota management mechanism. Designed especially for administration, WinQuota provides quota management for folders and files separately for any kind of users, groups, including support of Windows Domains and Active Directory network users.

WinQuota guards disk space for any system wide process and provides the way to keep the system in a safe state from disasters like disk overflows. Usually if some service has eaten all disk space, other services fail too. But with WinQuota all other services will work continuously even if some service eats its limits.

WinQuota 3.0 is enhanced with new friendly interface that allow easily cope with wide range of WinQuota features. Ability to generate reports gives an opportunity to hold composite analysis on space usage and monitor usage statistic.

All kind of Windows servers are supported by WinQuota 3.0, including Windows 2000, Windows 2003, and Windows Appliance Edition.

Now WinQuota 3.0 is available in two editions: Professional and Corporate. Professional edition is aimed to automate usual Administrator work concerning managing disk space limits and space usage monitoring and includes all WinQuota 3.0 features necessary for small and medium companies.

Most important features of WinQuota 3.0 Professional edition are:

- Real time hard and soft limits support
- Notifications (including 3rd party scripts and programs)
- Exclude lists support
- Complete domain and Active Directory support
- Detailed statistic and tips

Corporate version expands Professional version functionality with:

- SNMP monitoring and SNMP notifications
- Web based administration
- Windows Clustering support
- support of Huge domains and Active Directory forests
- support of Itanium platform as well as AMD64
- support of Windows 2003 Appliance Edition

WinQuota also now provides separate WinQuota SDK to give an opportunity 3rd party companies to use their own components, and integrate WinQuota into existing IT infrastructure transparently.
