GizMac Accessories Ships 4U Rackmount Cabinet Designed to Reduce Rackmount System Noise

PR9.NET July 05, 2006 - Torrance, CA – – GizMac Accessories, LLC, designer and manufacturer of rackmount cabinets for noise reduction, announces that the 4U XRackPro noise reduction enclosure rackmount cabinet begins shipping today.

Building on their success with the 12U XRackPro noise reduction rackmount cabinet, GizMac Accessories is releasing their new 4U XRackPro for customers with less rackmount cabinet capacity needs.

"Our new 4U XRack rackmount cabinet was created for customers that have only a couple rackmount systems," says Ken Vitto, Director of Marketing for GizMac Accessories, "At the same time, the price point is so aggressive, that multiple 4U rackmount cabinet purchases will be cost effective for growing and larger organizations as well."

By reducing noise levels, the 4U XRackPro2 rackmount cabinet allows computer, audio / video, medical and other equipment to be placed in areas that require low noise. Post production for film, video and audio editing; television, cable and radio broadcasting; health care, dental and veterinary locations; military, education and government or any other environment that requires low noise will benefit from the new 4U noise reduction rackmount cabinet.

The 4U XRackPro rackmount cabinet provides other benefits in addition to reducing noise. With locking front and rear doors, the 4U XRack protects the rackmount systems from unauthorized tampering. Also, the small size of the 4U rackmount cabinet makes it easy to move for travel within or outside of the office. Lastly, optional caster wheels will give the rackmount cabinet more mobility; the XRackPro can be moved without removing the rackmount systems inside.

Pricing for the 4U XRackPro2 rack mount cabinet is \$499.99 US retail; purchases can be made through authorized resellers and on the XRackPro web site at <http://www.XRackPro.com> or by calling the corporate headquarters at (800) 475-1677.
