International Food Safety & Quality Network Profiles Encompix ERP in next issue

PR9.NET July 17, 2006 - Cincinnati, OH - The Summer 2006 issue of International Food Safety & Quality Network (www.ifsqn.com) recently profiled Reading Bakery Systems which selected Encompix ERP because of its clear focus on engineer-to-order companies. According to Michael Cox, Information Technology Manager, this project-based ERP system addressed all of Reading Bakery Systems key requirements including, partial release of bills of material, tracking budget to actual costs, and handling long lead time items.

According to Thomas R. Cutler, manufacturing journalist of the feature article, "The RBS E.I. Groff Technical Center is a unique research & development facility that demonstrates Reading Bakery Systems state of the art equipment and provides complete processing lines for testing of new products, formulations, techniques and equipment with complete confidentiality. The Technical Center is also available to customers that wish to produce and package product for consumer or market testing."

Looking to the future, Reading Bakery Systems is expecting major improvements to improve business performance. "We expect to improve the accuracy and speed in which we generate our estimates," said Cox. "When we quote new equipment, we need the costing data from previous projects at our finger tips. In this competitive market we may lose business if we quote too high, or lose money if we quote too low. Currently, if we accept a job and quote a delivery date, we have limited information to back up that decision. We don't know the full extent of our workload in the shop or in engineering. We just figure a way to get the job done. But sometimes we get overloaded and we struggle. We want accurate information to back up delivery dates and make decisions based on real data."

Cutler concluded, "Whether improved quality through accurate information technology software solutions or certification verification of food equipment standards of quality, both practices are integral to a lean quality initiative and support the notion of continued process improvement."
