Using the Mi-Forms Software Platform, Logical Progression's goal is to provide an electronic solution that becomes the industry standard for patient data collection

PR9.NET August 23, 2006 - Research Triangle Park, NC. Mi-Co, the mobile data capture company, and Logical Progression, a software company specializing in healthcare interfacing solutions, today announced a multifaceted business and technology partnership that will bring HL7 interfacing and HIPAA compliant applications to the Tablet PC market.

With this partnership, Mi-Co will provide Logical Progression access to the full range of the capabilities within the Mi-Forms Software Platform. This includes the software development kit for building pen perfect healthcare applications for the Tablet PC. The development agreement also includes joint sales and marketing activities.

"Logical Progression is a customer oriented company with an extensive amount of form and healthcare experience. In addition, the staff's experience in Microsoft .NET technologies is truly impressive. We are pleased to forge this alliance because we are confident that Logical Progression will bring major business benefits to our joint customers," stated Carolee Nail, Mi-Co's Vice President of Operations and Channel Development.

Logical Ink is a mobile data collection solution for healthcare that utilizes Tablet PC to help healthcare professionals save money, eliminate paper and capture "clean" data more quickly and easily. This ASP/smart-client solution combines Mi-Forms core technology with healthcare-friendly features such as support for quickly converting forms and creating validation rules, automating conditional form packets, HL7 interfacing, enterprise-level security and HIPAA/FDA compliant audit trail. Logical Ink customers are able to easily create an "electronic paper" version of their forms and extract data without redundant data entry or form scanning.

"We are excited about this partnership with Mi-Co and taking Logical Ink and Tablet PC to the healthcare enterprise," said Chris Joyce, president of Logical Progression. "The industry has been begging for technology like this for years and now that Mi-Co has made handwriting recognition reliable and fast, we can build on their technology and truly provide an electronic solution that is better than paper. Our goal is to make Logical Ink the industry standard for patient data collection. "

Chris Joyce has a decade of experience in the electronic forms industry. Before founding Logical Progression in 2005, he served as Director of Software Development and Support for Addressograph Healthcare.

###

About Logical Progression

Logical Progression is a software company specializing in healthcare interfacing solutions and .NET integration/migration services. The company is headquartered in Cary, NC. For more information, visit www.logicalink.com.

About Mi-Co

Mi-Co, the mobile data capture company, provides digital writing software to increase the efficiency and effectiveness of the entire process of capturing and using data. Mi-Co's end-to-end enterprise Mi-Forms Software System enables flexible forms design and the capture, handwriting verification and communication of forms based data for enterprise users. Mi-Forms supports enterprise data capture using the Tablet PC, Digital Pens, Pocket PCs and signature capture devices. Mi-Co is headquartered in Research Triangle Park, North Carolina and a Seattle, Washington customer service center.
