Unique online Plant Finder directory provides the ideal way for garden suppliers and plant nurseries to reach a growing customer base of 8000+ enthusiastic gardeners

PR9.NET September 09, 2006 - Oxford, UK – Complete Gardens announces the availability of its unique online Plant Finder directory with advanced search functionality. The web plant directory features some of the thousands of plant profiles available on the Complete Gardens CD-ROM gardening encyclopaedia, together with stunning colour photography. This powerful gardening software includes a plant selector and pruning guide, and has been chosen by BBC Gardener's World Magazine as the 'Pick of the Best'.

For more information visit: www.complete-gardens.co.uk or call: 01865 512561.

Invaluable resource for gardeners and gardening product suppliers

The online Plant Finder directory that accompanies the Complete Gardens CD-ROM resource offers a unique opportunity for gardening product suppliers and nurseries to list their products and location. There is an option for nurseries and plant stockists to have links from the Plant Selector and Pruning Guide CD-ROM as well as the website directory. Neill Bromhall, the creator of the Complete Gardens CD-ROM explains: "the directory provides the ideal way for garden suppliers and plant nurseries to reach our growing customer base of 8000+ enthusiastic gardeners. An entry in the directory allows customers to find reliable and specialist suppliers of a wide range of gardening products."

The directory is subdivided into a number of plant categories to make identification of suitable plants even easier. "Each plant on the CD-ROM is beautifully photographed and accompanied with in-depth advice on plant care and pruning advice," says Neill. The directory categories include: acid loving plants, container plants for spring, drought tolerant plants and plants for low maintenance gardens. Other specialist categories include: plants for chalk soil and plants for clay soil, plants for sunny positions and to attract bees, plants to attract butterflies and moths, and rabbit proof plants, as well as a section on saving water and wildlife together as suggested by Thames Water and the London Wildlife Trust.

About Complete Gardens CD-ROM Ltd

Complete Gardens is the leading CD-ROM encyclopaedia resource for UK gardeners. This powerful gardening aid and garden planning software includes a plant selector and pruning guide designed specifically for the UK gardener and has recently been updated to include new plant varieties to cope with climate changes. The step-by-step illustrations and advice on the CD-ROM are designed to make any beginner into a confident gardener. Complete Gardens has been developed by Neil Bromhall, the Emmy Award Winning cameraman on David Attenborough's 'Private Life of Plants', and is lavishly illustrated with over 7,200 stunning photographs to aid identification and seasonal changes. The CD-ROM features over 2,700 UK garden plants ranging from alpenes to trees, with the addition of 246 drought tolerant plants.
