FlowMaster selects EMANIO, Inc. Enterprise EDI Integration platform

due to EMANIO's established experience and expertise with EDI and data integration.

PR9.NET October 30, 2006 - Santa Rosa, California -- FlowMaster, manufacturers of high performance automotive exhausts, selected EMANIO's TradingPartner Integrator EDI Integration and data conversion platform. FlowMaster chose the EMANIO solution over other competing alternative products because of EMANIO's ability to provide an efficient, low cost turnkey solution for supply chain integration.

As FlowMaster CEO Bill Rider said, "EMANIO's more than twelve years of EDI Integration experience and the ability of the TradingPartner Integrator product to handle our transaction volume were critical factors in our decision to select their company." EMANIO's turnkey proposal provided a guaranteed solution with no hidden charges. EMANIO's comprehensive feature set coupled with its total solution proposal made for a winning combination. A document was mapped and ready for processing within a few hours of installing the software. Mr. Rider went on to state "EMANIO's experience in integrating with our Industrial Financial Systems (IFS) ERP system was critical in our decision to select their company."

FlowMaster chose EMANIO's TradingPartner Integrator platform designed to easily and seamlessly translate EDI (X12) data and integrate that data to any back-end system. EMANIO's Total Solution approach meant that once quoted FlowMaster had a guarantee that the installation would be completed on time, on budget and successfully with an easy to use product that allowed for ease of mapping and EDI translation today and in the future.

EMANIO's total solution approach provides customers with a firm-fixed price quote on all aspects of the sale – software, installation, training and implementation – giving EMANIO customers the assurance that deployment budgets won't spiral out of control. EMANIO's TradingPartner Integrator product can manage over 17,000 transactions per minute and provides a seamless way to integrate translated EDI data into any back-end system.
