Sherwood School District (www.sherwood.k12.or.us) chose Portland Portals (www.portlandportals.us) to create their multiple school Metadot intranet extranet portal skin design.

PR9.NET October 30, 2006 - Portland, Oregon - "Portland Portals handled all facets of the new Metadot skin design implementation, including moving our existing portal to our district's new server, leaving us free to manage our Metadot Content. We have received excellent reviews from users of our new website portal and we feel Portland Portals gave us a great value." said Traci Sutherland, Sherwood School District.

Sherwood school district, located in Sherwood, Oregon, just outside Portland, Oregon, is made up of high school, middle and elementary school websites as well as central administration and information portal intranet extranet pages.

Portland Portals developed initial design mock-ups based on their existing content website, including our exclusive Metadot Rotating Content Gizmo, and integrated the Metadot skin to conform to Sherwood School District's content management processes.

Dan C. Jamison, Superintendent, Sherwood School District, said "We appreciate the fresh look of our District web page. Portland Portals delivered a layout that is much more user friendly and better serves our students, parents and community".

Portland Portals allows small and medium size organizations to benefit from the collaboration tools used by large corporations and governments without the usual large investment required for similar solutions. Based on the Metadot Portal Server, an open source intranet extranet solution, the Portland Portals Hosted Solution products are perfect for small and medium sized companies wishing to share information across the Internet with several types of groups.

"Sherwood was looking for simple navigation and a fresh new look" said Scott Hucke, President of Portland Portals. "We also developed an exclusive rotating content gizmo, integrated with Metadot, allowing them to place dynamically changing content by simply adding the gizmo to their page, filling out the content to display, and pressing save".
