ENOSERV today officially launched its new online forums site for open discussion on all things related to ENOSERV and its product line.

PR9.NET November 28, 2006 - TULSA, Oklahoma - ENOSERV today officially launched its new online forums site for open discussion on all things related to ENOSERV and its product line. The ENOSERV Community Forum and Routine Exchange can be accessed at <http://support.enoserv.com/index.php?opt=forumMain> and community members are encouraged to post tips, tricks, questions and general discussion on relay testing.

"The ENOSERV Community Forum site is a great way to communicate user to user experience and share relay testing solutions from other users," said Shelley Luster of ENOSERV. "This site is a great resource for ENOSERV users; it is always on and connects customers and company."

The new Community Forum site is an interactive environment where ENOSERV users and employees can communicate with, support, search for, and share industry knowledge with one another on topics ranging from user developed routines to relay testing best practices. ENOSERV Community Forum is a neutral location for all relay testing dialogue and strives to provide interesting discussion and topics for user to user conversation.

"ENOSERV has long been known as a company that has close ties with its customers," said Dennis Loudermilk, ENOSERV President. "Developing an online community where we can better share information and communicate more efficiently with the people that use our products was a no brainer for ENOSERV. We anticipate and encourage engaging discussion moving forward."
