*.Net based open source CMS was custom configured into a collaborative product design project management platform and deployed for a large apparel manufacturer from Boston.*

PR9.NET December 08, 2006 - Portland, OR - Encodex Technologies, developer of Microsoft .Net and SQL server based applications & Microsoft GOLD Partner; successfully designed and developed Content Management System ( CMS ) using .net based open-source platform.

Encodex designed this highly customized, made-to-fit application to manage product design and process management.

Prashant Pawar, Director Engineering Encodex Technologies said, "Our team customized the role based authorization and user registration processes to suite client's needs. We developed several unique modules like Approval Chains, Spectrum View of the Search, extended the security features of open source CMS and improved its usability by adding web-services and web-parts. The use of .net based open source platform provided tremendous cost advantage to our client. Encodex Technologies can easily customize .Net Open Source Platforms for any business needs."

###
