GSshelf's website has elegantly been re-designed and truly exemplifies the creative talent of its creators.

PR9.NET April 29, 2007 - Bangalore, India - CGShelf's website has elegantly been re-designed and truly exemplifies the creative talent of its creators. "The new design is much more user friendly and colorful than the previous one", says Martin Maravattickal - Director of cgshelf.com.

"Our main intention is to give the site a new, colorful and creative look and feel without losing our site's simplicity", says Albin Joseph - CEO of cgshelf.com. He continues, if we wanted we could have made the website extremely fancy. The main reason for not doing this is because we do not want to lose our simplicity."

As Part of the website's redesign, there are a couple of new sections that have been introduced. One of them is "Making". Making, is a detailed description of how the artist created his or her own piece of art from scratch. Another section that has been included is "Articles". This section contains articles written by experienced artists in the Computer Graphics industry. "Interview" is also a new section that contains interviews with top-notch professionals in the CG industry.

"Upcoming Artist" is the latest section that has been added to the site. This is where upcoming artists have a chance to introduce themselves and show their works to the industry. "We wanted to create a platform to expose budding artists' work", says Arjun Thekkumadathil - one of the founders of cgshelf.com. A large number of step-by- step tutorials have also been added to the website.

The website's exceptional flash animation and its easy-to-use features should stir excitement both within and outside the Computer Graphics community. For further information, visit <http://www.cgshelf.com>.
