Custom Craft Plastics Releases Innovative Business Card Holders to Solve an Age Old Problem

PR9.NET June 11, 2007 - Santa Fe Springs, CA -- Custom Craft Plastics, designer and manufacturer of innovative literature display products, begins shipping new customizable business card holders.

Custom Craft Plastics has developed new business card holders with an innovative design. This new business card holder allows all the business cards to be visible at the same time. These new business card holders solve the problem of which business card is placed in the front and which cards are only partially visible.

In addition to this unique design, these new business card holders can be customized by layout, number of cards and more. Based on a company's needs, the business card holders can be designed with various numbers of rows and columns. With this level of customization possible, businesses can organize business cards by title, department or any other way they choose.

Going one step further with customization, Custom Craft Plastics can add Graphics and/or text to the business card holders. This custom printing can be added to the business card holders for promoting a company, product, service, message or other important detail. Graphics can be a company logo, a product illustration or other related image.

"Custom Craft Plastics creates holders that get your business cards noticed." says Harry Vitto, founder of Custom Craft Plastics, "If it is important for your organization to put a business card in someone's hands, then you will want to consider our business card holders."

Additional information on Custom Craft Plastics and their business card holders can be found on their web site at <http://customcraftplastics.com>. Information can also be obtained by calling the Southern California headquarters at (800) 217-7779

About Custom Craft Plastics

Custom Craft Plastics, Inc. is an innovator in the acrylic plastic fabrication industry. Our company designs, manufactures and silk-screen prints standard and custom products. All our products are hand built for superior quality, yet our pricing is some of the best in the industry for this level of work.

Hand crafting of our items allows us to produce superior looking products as compared to other companies that use molds to form their items. While molded products can be less expensive when mass produced, they tend to leave noticeable imperfections from the molding process.
