Software developer NTR Group Inc. has released the beta version of the QuickHydra Advanced Internet White Pages.

PR9.NET June 19, 2007 - Moscow, Russia – Software developer NTR Group Inc., owner of NTR Lab, Inc. and NTR US, Inc., is proud to announce the release of the beta version of the QuickHydra (quickhydra.com) Advanced Internet White Pages.

These Internet white pages present a dynamic database of businesses across the US, including type of business, location, exact address, phone number and email.

Unlike other white page listings that are created using human agents, QuickHydra's innovative technology automatically extracts, analyzes and annotates the key information from public websites—from simple email addresses, and phone numbers, to difficult-to-capture physical addresses. To create this complex system, NTR used a proprietary, new technology with Artificial Intelligence elements.

Additionally, companies may register themselves to achieve an earlier listing.

NTR believes that this technology will facilitate a new generation of online business directories.

###
