

Revolutionary Software Makes Learning to Read and Write Fun and Easy

Child Font, June 20, 2007

URL: <http://www.pr9.net/comp/edu/5752june.html>

Child Font Software was designed to teach, aid and/or improve reading and writing skills in students age 2-12. Whether children are just beginning to learn about print or are familiar with print, this multi-sensory learning software has been proven to improve achievement in some of the core language skill bases.

PR9.NET June 20, 2007 - Pretoria, South Africa - Groundbreaking educational programme Child Font (<http://www.childfont.com/>), has been heralded as an incredibly important development in the way reading and writing is taught and learned. Based on the concept of multi-sensory learning, that is education involving an array of senses and perceptions, Child Font has been proven to produce exceptional results in K-12 children acquiring reading and writing skills. Child Font adjusts to students' individual learning styles by offering research-based teaching/learning methods. Constructing letters, sounds, words, sentences, and engaging stories via varying approaches, Child Font grasps the concept that every child has a unique way of learning.

Reading and writing can be difficult to grasp at a young age and progress can be slow and even unattainable without appropriate intervention. Until now, teaching typically focused on traditional methods with the student playing a passive role in learning. How boring and limited for our children! Child Font embraces modern technology, maintaining a variety of teaching approaches that best addresses the diverse learning styles of children. Child Font (<http://www.childfont.com/>) software provides a liaison or communication connection between teacher and pupil providing monitored and measured support throughout the learning process. Developed by a recognized industry expert in language and reading education, Child Font works on the basis of linking letters, sounds and words with pictures and a 'join the dots' technique that allows students to work through the alphabet and letter formation at a controlled pace for optimum development.

Child Font has been recognized as an excellent tool to increase your child's capability prior to, and during the early school years. By working with children in an entertaining and interactive manner parallel to their stage of intellectual development, Child Font introduces writing and reading as an exciting concept. One in which children seldom realize they are gaining the most important foundation upon which their entire education will rest. Brenda Geier, an advocate for children, brings her expertise as K-12 Reading Specialist to Child Font offering invaluable knowledge and partnership with parents, teachers and children.

"Child Font software was developed specifically to work in harmony with the stages of child development. Every child should have equal access to technological advances in learning. With the advent of the Internet, learning and teaching are no longer confined to the stuffy classroom. No longer are a selected few privy to a high quality learning experience. Child Font(<http://www.childfont.com/>) brings this unique experience to you as a tool that will contribute significantly to your child's development."

Child Font (<http://www.childfont.com/>) is being tried and tested privately and in numerous primary level educational establishments to transform the way in which reading and writing is taught. With continued mainstream support, it is predetermined to become a significant teaching utility in the coming years.
