Added enhancements allow users to customize Customer Appointment Manager for patient appointment scheduling and client appointment scheduling.

PR9.NET June 28, 2007 - FARGO, ND – Customer Appointment Manager, the appointment scheduling software from Atlas Business Solutions, Inc. (ABS), can now be used as client scheduling software and patient scheduling software. ABS has introduced an enhancement that allows Customer Appointment Manager users to change the customer field label. Users can modify their company options to change the customer reference to client or patient throughout the program, including reports.

"Customer Appointment Manager is used by many businesses to schedule clients and patients. Our current customers include many chiropractors, dentists, eye-care clinics, and veterinarians, as well as accountants, massage therapists, spas and salons. Now our customers can use Customer Appointment Manager as their client appointment scheduling software or as their patient appointment scheduling software," says Jon Forknell, vice president and general manager of Atlas Business Solutions. "They wanted to customize Customer Appointment Manager even more for the way they run their business," Forknell said. Customer Appointment Manager continues to allow users to add up to five custom fields to customer forms and appointment forms. New customers can take advantage of this improved feature immediately and current customers can download an update at no cost.

###
