Talexus now offers high quality and high-speed digital telephone service with unlimited calling for \$29.95

PR9.NET July 05, 2007 - Florida, US - Talexus serves over 100,000 communities across America with our high-speed digital telephone service. We offer a superior Digital Voice service through a "carrier class" Voice over IP network with special features our competition does not offer, as well as a premium 24/7 support call center.

Over 10 million households have already switched to Digital Voice Telephone Service! When products are reengineered to digital environments the quality increases and the price decreases. Therefore, you can get more for less.

In the past you could only receive telephone service from your local telephone company. That was then and this is now! If you have a broadband (DSL or cable) internet access connection and live in one of the over 100,000 communities we serve, you can now have unlimited local and long distance calls for a low monthly price that may be up to 50% less than your local telephone company is charging you now!

There are about 100 million households in America today. By the end of 2004, there were 1.3 million households (about 1.3%) that had already switched to digital or VOIP service. By the end of 2005, that number surged to 4.5 million (about 4.5%) - more than a 300% increase. Today there are well over 10 million households (about 10%) that have switched to digital or VOIP service and the industry experts have projected 44 million by the end of 2010. Furthermore, if you were to analyze the growth in cellular, which almost everyone uses today, you would notice two very important things. First, digital or VOIP telephone service is growing faster than cellular did in its early days and second, all of the industry experts forecasted low and had to keep increasing their forecasts.

xTherefore, there is a good chance that once again the experts are forecasting low and there could be many more than 44 million by the end of the year.
