SQL Farms, Inc. a leading provider of database management tools for large IT environments announced investment partnership with DeParis Redinger LLC, a progressive technology-focused boutique investment bank led by former Microsoft M&A executives.

PR9.NET August 03, 2007 - RESTON, VA - SQL Farms, Inc., a leading provider of database management and administration tools for large IT environments, announced earlier today an investment partnership with DeParis Redinger, a progressive technology-focused boutique investment bank led by former Microsoft M&A executives. Under the terms of the partnership, two managing directors at DeParis Redinger, Mr. Kyle Redinger and Mr. Francesco DeParis will hold key positions on SQL Farms' management board to assist and lead the company through its ongoing growth. Additional details regarding the partnership were not provided by either side and remain undisclosed at this time.

"In the last several months DeParis Redinger and SQL Farms have been working very closely in a number of different areas to plan and facilitate the rapid growth of SQL Farms," said Dr. Omri Bahat, Chief Executive Officer of SQL Farms. He added, "Formalizing this relationship represents a significant milestone, one of several that will be announced in the near future."

When asked about the partnership, Mr. Kyle Redinger replied that "SQL Farms has demonstrated that managing complex data farms will only become increasingly difficult in the future. The company has created a truly innovative solution that addresses the needs of a world that is becoming digital. We are happy to lend our experience and advisory to the SQL Farms team and believe our roles will facilitate the acceptance of a much-needed database technology."

###

About SQL Farms, Inc.

SQL Farms, Inc. is a product-focused company that develops tools for database administrators and developers working in large enterprise environments and datacenters. At the core of the SQL Farms' products is a distributed parallel database access (patent-pending) technology that allows users to work with many databases and servers in parallel the same way they work with a single database today.
