

Engate Enhances Network Profiling, Connection-level Anti-Spam Solution with Comprehensive Phish Protection

Engate Technology Corporation, September 27, 2007

URL: <http://www.pr9.net/comp/internet/6413september.html>

Engate Technology Corporation, a leading anti-spam supplier and pioneer of next generation network profiling and connection management security solutions, today unveiled the latest release of Engate MailSentinel 3.5. The new release introduces, PhishFilet®, the industry's first network-layer, preemptive solution against phish attacks. Powered by Engate's unique Network Profiling technology, PhishFilet® eliminates sophisticated phish attacks at the connection-level, prior to transmission to an Engate protected network with 99% accuracy or higher and virtually no false positives.

PR9.NET September 27, 2007 - San Jose, CA - PhishFilet® operates at the network connection layer where the phish target domain's true identity cannot be hidden or forged. Using eight patent-pending technologies, Engate achieves the highest accuracy in the market by profiling entire networks to detect protocol fraud and determine the legitimacy of a sender's message before transmission to the private network by uniquely segregating legitimate mailers from all other network hosts. This proprietary technology empowers organizations to preemptively identify incoming mail from phish target domains and intelligently reject these illicit connections outside the network prior to mail transmission.

"Engate MailSentinel continually achieves the industry's highest performance, compared to reactive reputation and content filter technologies that compromise detection accuracy, false positives and response time," said Rich White, Chief Technology Officer, Engate. "Our solution delivers a customer proven block rate of 99% of inbound connections. Engate's preemptive network profiling approach gives our customers the fastest response to compromised hosts and new botnets the instant they emerge, ensuring immediate protection against any creative tactic that may arise now or in the future."

Engate MailSentinel: The Last Anti-Spam Product Companies will Need to Buy

Spammers cannot penetrate Engate's protocol layer technology, now or in the future. Engate MailSentinel is impervious to email threats because it uses proprietary techniques, logic tests and source information that cannot be forged, circumvented or adapted by a spammer's present and future tactics. Essentially it is the last anti-spam product companies will need to buy. Used as a standalone solution or to complement existing reputation, content filters and server-based products, Engate MailSentinel empowers organizations with the following benefits:

- **Market-Proven Performance.** Achieve 99% accuracy with virtually no false positives.
- **Reduced Costs.** Up to \$1000 annual employee productivity savings + savings from network bandwidth, server storage, IT costs, and email infrastructure, etc.
- **Increased Throughput.** Improve messaging throughput up to ten times. Remove delivery bottlenecks and ensure business critical email flow.
- **Improved Operational Efficiencies.** Reduce up to 90% in inbound data connections. Preserve CPU cycles, bandwidth and storage consumed by spam.
- **Improved Employee Productivity.** Regain hundreds of person hours each month. No need to expend resources to process and store spam.

Fast, Easy and Risk-free Evaluation

Companies can sign up today for a free trial of Engate's breakthrough network layer anti-spam security. Registrants have the option to sign up for an on premise evaluation or a hosted trial evaluation which offers all the features of Engate's industry-leading appliances in an easy-to-use virtual setting. This no-cost, fully-functional trial version is a fast, easy and risk-free way for organizations to evaluate Engate's preemptive anti-spam functionality. Within minutes of installing, users will experience comprehensive protection from spam, image spam, pdf spam, phish, email-borne attacks, botnet attacks, etc. Register by visiting: www.engage.com/trial/.

Availability

Engate MailSentinel™ is available immediately to service providers, enterprises and small to mid-size businesses. The product is also licensed to anti-spam software, security appliance, router, firewall, and unified threat management vendors.
