With number of terrestrial activities through cyber cafes and decreased work efficiency, personal activities like internet shopping, news, sports and pornographic activities being performed at offices; employers need to monitor the internet activities of their employees to eliminate such activities and increase the work efficiency and productivity. Chily Screen recorder is an employee monitoring software which enables you to view and monitor employee internet activities from your system.

PR9.NET November 11, 2007 - New Delhi, India - Chily Softech Private Limited, the provider of data recovery software and Internet security tools, announced the release of Chily Screen Recorder – an employee computer monitoring software.

Chily Screen Recorder is a powerful network monitoring software for remote computer monitoring, useful for business and home network environment. The computer monitoring software allows you to View – Monitor – Record the desktop and internet activities of a user connected within a network whether in a domain based network or non-domain based network. It allows you to take control of Windows 2000/2003/XP (with service pack 2) / Vista operating systems.

With Chily Screen Recorder, the software to monitor employee activities, you can easily view chats, sent-received emails, instant messaging, visited websites, file downloads, internet activities, log on/log off activity, and whichever files are transferred through emails. You can easily view what your employees do online and how much time their system is in idle process. The internet activities can be recorded for the purpose of later viewing or presenting as a proof of improper usage of internet during work hours.

"We have developed Chily Screen Recorder software keeping in mind the cases of decreased work productivity, work efficiency, personal security, child internet activities, prevention of unauthorized use of internet, email abuse, pornographic activities; which lead to increased cases of less productivity, misleading activities, child abuse cases, and employee sabotages" -- as remarked by Marketing Head - Chily Softech

Key Features of Chily Screen Recorder Software are:

Increased Security: Monitor employee activities and ensure increased security of your important documents to be transferred through emails and prevent cases of email abuse, pornographic activities, and decreased work efficiency.

View Every Activity: View every activity like chats, sent-received emails, instant messaging, visited websites, file downloads, internet activities, log on/log off activity, and every file which is transferred through emails.

View and Monitor: View and monitor activities of your employees – time devoted to work activities, personal activities. An employee when comes to know about the monitoring process, becomes more consistent in work, which increases the work efficiency and decreases the percentage of time devoted to personal activities.

Schedule and Record: Schedule to record activities of a specific employee computer and record the activities daily or on hourly basis. The scheduled recordings help to record and save activities in a movie file format which can be viewed with Windows Media Player later on.

Create and View Movies: Scheduled recordings can be easily converted to a movie file for viewing purposes or in an image slide show format.

Useful for: Chily Screen Recorder is useful for Network Administrators, Companies/Organizations/Industries, Security Officials, Small Organizations, Home based Network and every place that requires high ended security and purpose of monitor any suspicious activities.

Free Trial: Chily Screen Recorder 30 day trial version can be downloaded from our website. It allows you to monitor 1 computer system over network for 30 days. Test the monitoring software and then purchase Full version of the employee monitoring software. Supported platforms are Windows 2000/2003/XP (with service pack 2)/Vista.
