EntropySoft the European leader of the ECI (Enterprise Content Integration) market, specialist in the integration of unstructured data, announced the availability of its Interwoven TeamSite connector.

PR9.NET January 17, 2008 - Paris, France - This technology enables all Interwoven TeamSite repositories to be connected to the EntropySoft engine in a few clicks. As soon as they are connected, the solution Content ETL can manage content migrations between TeamSite and all other applications.

EntropySoft uses bi-directional connectors as foundations of its strategy of content interoperability. These connectors implement the main features of all the connected applications. EntropySoft delivers the broadest existing catalog of bi-directional connectors. On top of these connectors, EntropySoft delivers two solutions.

EntropySoft Content ETL extracts, transforms and loads content between numerous content repositories. This solution is used for Records Management projects to connect and organize transfers of records from all applications into the ERMS solution, either for publishing content or for complex migrations.

EntropySoft Content Federation is based on EntropySoft presentation platform. This platform consolidates all content repositories and delivers federated user interfaces through different technologies. Content Federation accelerates integration of contents with business applications and offers users a vertical and unique point of access.

With this new connector, EntropySoft is continuing to transform radically the approach of users and organizations in the management of content. EntropySoft helps you optimize the use of your content assets.

About EntropySoft

Entropysoft is focusing on the integration of unstructured data and is a pure player in the ECI market (Enterprise Content Integration). Information access expert, EntropySoft's mission is to break down technological barriers that hinder the use of companies' content assets and make content interoperability easy.

Entropysoft has the most extensive bidirectional connectors portfolio in the world. This portfolio is available for software editors and system integrators.

Leading global organizations like BNP Paribas, Total and Radio France Internationale rely on EntropySoft technology.
