PR9.NET January 30, 2008 - Kilkenny, Ireland - People who are responsible for managing and protecting their company's infrastructure and computer networks no longer have to spend significant time worrying about security issues. Protocol Solutions, which recently disclosed an undetected vulnerability in Dreamweaver 8.0.2 Flash Player, offers services to companies and businesses that need protection.

Protocol Solutions is an information security management company, specializing in computer network safety and security strategies. Its most utilized service is penetration testing, which determines an online site's vulnerability to attacks. Additionally, the company provides services ranging from security cover for internal mails and databases to fulfillment of SOX (Sarbane-Oxley) and BS7799 requirements.

The United States Computer Emergency Readiness Team (US-CERT) recognized Protocol Solutions in its website's Vulnerability Notes Database section due to the company's identification of an Adobe Flash Player malfunction. This vulnerability could potentially allow a remote, unauthenticated web attacker to conduct cross-site scripting attacks on websites hosting certain Flash files.

Protocol Solutions technicians are trained professionals who embody the company's mission to protect its customers' network and IT infrastructures. Protocol's Service Level Agreements are available to meet each organization's individual needs and to help keep them ahead of the competition.

"IT infrastructure and computer networks form the primary backbone of companies and their business operations, and it's the responsibility of management to see that these valuable resources are safe and secure," said Paul Walsh, Protocol Solutions Founder and Owner. "We are here to help companies achieve the highest level of security, so that they can continue with the other tasks of their business. We work together with clients to make their businesses as secure and successful as they can be."
