TankDepot.co.uk – the UK's leading online reseller of oil storage tanks has announced an important new addition to the company's range of environmentally preferred bunded tanks.

PR9.NET February 25, 2008 - Little Eaton, United Kingdom - Online storage tank specialist TankDepot.co.uk's range continues to grow, with the addition of Harlequin's all-new 1,200 litre Low Profile Bunded Oil Tank to the company's fast growing range of environmentally preferred, bunded oil storage tanks.

Now that Bunded Tanks are a legal requirement at most new and replacement heating oil storage tank installations across the UK, the new 1200BND/ENV model builds upon the success of Harlequin's single skin 1200LPA model – and successfully combines it with the acknowledged environmental benefits of integral bunding. At less than a metre tall, Harlequin's new 1200 litre Low Profile Bunded Oil Tank can nestle undisturbed in almost any location. It can be easily concealed behind a dry stone wall – making it an ideal choice for installation at traditionally constructed properties throughout rural Britain.

However, whilst the 1200BND/ENV may be small in terms of height, it is big in terms of specification and value! Featuring the very same, high added value specification as other members of Harlequin's Bunded Oil Tank range, the 1200BND/ENV is supplied complete with factory fitted fill, vent and inspection points, lockable manhole access, dipstick and Apollo electronic oil tank contents gauge.

To eliminate the risk of spillage during delivery, the tank also features inbuilt protection against overfills, courtesy of Harlequin's failsafe LRC Overfill Prevention System. Already established as the norm for environmentally responsible fuel distributors across Europe, the LRC system allows drivers to remotely control the filling operation from the tank and is proven to eliminate overfills during refuelling. A welcome and low-liability alternative to old-fashioned and sometimes unreliable, mechanical overfill prevention valves, LRC type systems are now being embraced by environmentally conscious fuel distributors across the British Isles too.

A choice of both top and bottom outlets are available on the 1200BND/ENV model. All Bottom Outlet models supplied complete with Tank Fitting Kit which comprises Reducer, Filter, Isolation Valve, PTFE Tape and Heldite Liquid Sealant... to complete the installation, just connect the oil supply line! Top Outlet models are supplied complete with Harlequin's unique 'Ecoflex' top outlet as standard which includes oil resistant suction line, isolation valve and non-return valve.

According to TankDepot.co.uk Spokesperson Philip Breek, interest in the new 1200BND/ENV has been strong.

"The 1200BND/ENV has only been available for a matter of days, but the feedback we've received has been excellent. With bunding increasingly becoming the norm at most domestic installations, Harlequin has filled a useful gap in the market with the new 1200BND/ENV Bunded Low Profile Oil Tank. Its compact base dimensions make it ideal for installation in rural areas, whilst its high added-value specification is sure to appeal to homeowners, householders, fuel distributors and installers alike."

Firmly established as the UK's leading online reseller of Bunded, Single Skin and Underground Oil Tanks, the addition of the new 1200BND/ENV to the TankDepot.co.uk range brings the number of Bunded models offered by the company to over 150. In addition to the supply of Harlequin oil tanks, TankDepot.co.uk also supplies the market leading range of Titan Oil Tanks, Underground Oil Tanks from Schneider Industry UK, rainwater storage tanks from 3P Technik and storage tank accessories from some of the biggest names in the industry.
