Professional Solutions, a child care management software firm and developer of ProCare Software, announces corporate account market share reaching over half the market.

PR9.NET February 26, 2008 - Medford, Oregon - ProCare Software has attained a 54% market share of the 50 largest for-profit child care organizations in the nation. ProCare Software, the world's leading child care management software, has been utilized in the child care industry for over 20 years.

ProCare Software is now present in 20,000 centers across the nation. When asked how ProCare has accomplished so much success, President Jeffrey Blum said, "We built an intuitive and easy to use program and have maintained a strong user base by providing quality, toll-free support. We are certain that our customers are receiving the maximum benefit and results from their software investment."

Blum first developed child care management software in 1985 in response to a need he perceived in the child care industry. "We understand the direct correlation between business management and business success. It has been proven that a reduction in administrative paperwork increases efficiency, allowing business managers more time to focus on customers, staff and business growth. Designed on this premise, ProCare Software offers a strong foundation that promotes excellence and professionalism in the area of child care management." ProCare is a management tool that includes accounting, payroll, attendance tracking, automatic funds transfer and more.

Some of the corporate accounts that make up ProCare's 54% market share include Bright Horizons Family Solutions (655 centers), Mini-Skool Early Learning Centers, Inc. (109 centers), and Childtime Children's Centers, Inc., which owns Tutor Time and Children's Courtyard (300 centers).

ProCare Software can be found at www.ProCareSoftware.com.
