*AXIGEN announces the commercial release of AXIGEN Mail Server 6.0, introducing a fresh new set of groupware and advanced collaboration features.*

PR9.NET March 11, 2008 - Bucharest, Romania – AXIGEN (<http://www.axigen.com>), the professional messaging solution vendor, announced today the commercial release of the AXIGEN Mail Server 6.0. The new version is designed to effectively address the requirements of both collaborative enterprises and service providers offering hosting with added advanced collaboration services.

The new AXIGEN Mail Server 6.0 primarily features groupware and advanced collaboration functionalities that enable users to share their emails, tasks and appointments by granting colleagues permissions to read, write, delete or perform other actions on the content of mailbox folders of choice, to view others' free/busy status or to delegate the right to send messages in their name to co-workers.

This set of new groupware and advanced collaboration functionalities has shaped a new product version, the Enterprise Edition, a best-in-class solution to the requirements of collaborative enterprises that comes to enrich the existing AXIGEN Mail Server product range.

"Preserving a strong focus on Service Providers and reinforcing our commitment to pro-actively respond to their needs, AXIGEN Mail Server 6.0 now enables them to offer value added messaging and collaboration features, designed to complement their Software as a Service (SaaS) business model. Additionally, through the new Enterprise Edition that addresses collaborative companies, we are expanding our existing market by covering a new niche and we are confident this move will translate into outstanding results for AXIGEN and our partners and customers around the world." said Oana Bornaz, AXIGEN CEO.

With a carrier class technology and outstanding support, AXIGEN is becoming the messaging solution of choice for a growing number of service providers worldwide. Winner of the ServerWatch 2007 Product Excellence Award for the Communications Server category, the AXIGEN Mail Server currently runs on several Linux and BSD distributions, on Solaris, on PowerPC and on SPARC architectures.
