System adds features; upgrades to advanced architecture.

PR9.NET April 03, 2008 - LA JOLLA, CA - LearnSpeed LLC today introduced version 2.0 of CenterTrac (www.centertrac.com), an online education and tutoring center management system. The new version adds greater functionality to the existing product which puts every aspect of an education center's business online. From logging instructional sessions to generating invoice data, CenterTrac dramatically streamlines daily operations and supplies automatic feedback to clients. It provides center managers with realtime reports and data exporting. Data can be exported as Excel spreadsheets, PDF files, and QuickBooks.

"Since starting with CenterTrac, our administrative time and expenses decreased dramatically," said Colleen L. Christopher, owner of Study Depot (www.studydepot.com). "More significantly, our retention of students has improved, parents are much happier and tutors feel more involved."

"CenterTrac works very economically with education centers of all sizes," said LearnSpeed President Jared Wells. "If your center is just starting out or servicing several thousand students, CenterTrac will meet your needs and fit into your budget. Our experience has shown that centers using our product have more than covered the expense of the service through direct cost savings and increased business."

"CenterTrac has given us a critical tool for handling the volume of our SES students," says William Harris, Controller for Failure Free Reading (www.failurefreereading.com). "When we needed a report to export data the State of New York could import, CenterTrac came through. That feature alone paid for the service many times over."

In addition to a completely new, real-time user interface, CenterTrac 2.0 adds major new modules for use by both private tutoring and Supplemental Education Services (SES) providers.

Student Assessments

Session Credits

Group Sessions

Employee Time-Sheets

CenterTrac 2.0 has been built using the same advanced browser technology that Google uses for applications like Gmail and Google Calendar. This makes the new CenterTrac version feel less like a website and more like a local desktop application.

CenterTrac 2.0 comes with a new tiered pricing model that costs centers less the more they use the system. Centers are only billed for each active student they see each month and there is no term commitment. Access to all other information including work orders, communications logs, the task system, and student historical information is free.
