Screaming Bee releases ScriptVOX Studio to market. This product provides a convenient text-to-speech multimedia prototyping tool for story and screenplay writers.

PR9.NET April 10, 2008 - Middleton, WI - Screaming Bee LLC is pleased to announce the release of ScriptVOX Studio. This text-to-speech software opens a new window of creativity for writers who produce children's stories, documentaries, and screenplays. ScriptVOX Studio features high-quality voice modification, graphic storyboarding, and audio and video rendering capabilities. It provides writers with an effective tool for prototyping their stories and creating multimedia presentations.

"We created ScriptVOX Studio to bring a writer's story to life," says Mark Ramirez, CEO of Screaming Bee. He adds, "Writers can easily assign voices to their characters and create a graphic storyboard for the script. This is a great tool for helping a writer to prototype their stories."

ScriptVOX Studio has the ability to rapidly prototype a story, script, narration, or screenplay. A writer can import their story as plain text, RTF, Word doc, and PDF files. After assigning voices to the actors and the graphics to the text, a writer can playback their story as a multimedia presentation. In short order, a writer can find out how the dialogue and scenes flow.

ScriptVOX Studio uses the latest SAPI 5.0 technology in Text-To-Speech (TTS) to produce the character voices. In addition, the built-in advanced voice-changing technology allows users to enhance and modify any TTS voice. With just a single voice, a writer can create a whole cast of characters for their story. Additional digital algorithms allow a writer to simulate environmental effects on a voice such as phone, radio, echo and robot.

The storyboarding tool in ScriptVOX Studio provides a user with an easy way of associating images with the text in their stories. This allows writers to conveniently visualize their scripts and screenplays. Combined with ScriptVOX Studio's file rendering capabilities, a writer can also create an audio or video presentation.

A video demo of ScriptVOX Studio can be found at this link: <http://www.youtube.com/watch?v=qYtYXuSpZmw>

###

About ScreamingBee

Based in Middleton, Wisconsin, Screaming Bee is a leading provider of voice software and solutions for online games, VoIP and multimedia applications. Screaming Bee's high-quality voice morphing technology is used in online games. Gamers can now have voices to match their in-game characters. The flagship product, MorphVOX Pro, can be used to morph an existing audio file or record a voice directly to file. Studios that use this tool can save time and potentially thousands of dollars by creating multiple voices from existing stock audio or a single voice talent. MorphVOX Pro is used by professionals in a number of fields, including education, radio broadcasting, and animation.
