PrivacyView Software's Private Proxy now offers automatic connection to private domain names allowing users to surf the internet anonymously and avoid being blocked by outside parties.

PR9.NET April 21, 2008 - Tampa, Florida - PrivacyView Software, LLC the developer of award-winning Internet and computer privacy software, announced today that the latest release of its anonymous proxy server, Private Proxy, automatically connects to private domains.

This recent update allows Private Proxy users to avoid being blocked by outside parties, such as restrictive governments found in Asia or the Middle East. Private Proxy automatically connects to private domain names that are not blocked enabling secure anonymous surfing on the Internet.

Many restrictive governments have banned websites that their citizens wish to visit such as news websites from the NY Times and CNN, reference sites like Wikipedia and popular social media sites such as MySpace and Facebook. With the increase in censorship, people need safe and secure access to the Internet in order to protect their privacy and freedom. Private Proxy allows users to choose an anonymous proxy server where their Internet browsing can not be monitored or blocked. Learn more about censorship issues.

The software comes with a 7 day free trial allowing users to decide if they want to keep the service without having to spend any money. Along with the 7 day free trial, PrivacyView offers two options for its users: they can subscribe to a monthly service for \$9.95 or choose a quarterly option for only \$24.95.
