Brains II will market and resell CBL Data Recovery services across Canada.

PR9.NET May 01, 2008 - MARKHAM, ON - CBL Data Recovery Technologies Inc., Canada's leading independent data recovery services and software provider, and Brains II, Inc. are pleased to announce that Brains II will market and resell CBL Data Recovery services across Canada. Following Brains II's recent acquisition of NextInnovations' break-fix and warranty services division, this service alliance is the next progression of a 6-year relationship that CBL had with NextInnovations.

"Data recovery is often a missing piece of a reseller's solution puzzle," states Kalle Almer, Director of Business Development, of CBL Data Recovery Technologies Inc. "In fact, data recovery is often overlooked. For third party maintenance providers like Brains II, data recovery service completes any solution. While Brains II can fix what breaks, CBL can recover the data."

"Brains II continues its mission to deliver best in class solutions and services to its customers," comments Dave Massey, Vice President, Sales - Brains II, Inc. "Data recovery is an offering that will compliment Brains II's extensive list of service options. It will assist in consolidating yet another customer IT challenge with Brains II SERVICE CONSOLIDATION."

Brains II can leverage CBL's active RAID recovery practice. CBL's five step approach to RAID recovery minimizes downtime and business disruption when RAID Array failures occur. Brains II and customer IT staff can work in tandem to enable the restoration of critical business functions in anticipation of receipt of the recovered data. While the RAID Array is rebuilt, CBL personnel work to recover the data from the multi-drive sets removed from the customer's RAID and sent to CBL's data recovery laboratory.

Brains II customers who use older PCs, laptops and servers can take comfort in knowing CBL's expertise is not limited to current brands such as Acer, Apple, Dell, Compaq, HP, Lenovo, Sun and Toshiba. CBL engineers recover data from systems running Microsoft Windows Vista, XP or older; Unix, including Solaris, HP-UX and AIX; Linux, including Mandriva, Red Hat and Ubuntu; and, the Mac OS.

Brains II customers who require data recovery services can notify their Brains II Service Consultant or drop off their storage media at any of Brains II's service depots across Canada.

###

About Brains II, Inc.

Brains II is Canada's leading independent provider of on-site maintenance services for hundreds of manufacturers including IBM, HP, Sun, Xerox and many others. With extensive expertise and resources as a multi-vendor, multi-platform and multi-layered support organization Brains II covers the entire IT infrastructure from mainframe, midrange, network servers and attached peripherals to disk storage systems, automated tape libraries, distributed and large production printers. Established in 1979 with headquarters in Markham, Ontario, Brains II continues to provide mission-critical support to thousands of organizations in more than 100 locations across Canada 24 hours per day 7 days per week.
