The Green Log Home website has been voted by the public as 'Best Green Educational Product and Information' site. GreenLogHome.com educates individuals on how to build an affordable green home and how to make the home a safer place in to live in.

PR9.NET May 07, 2008 - New York, NY – The 'Green Log Home' educational website has been selected as best green 'Product and Informational Website' by the public. It now remains for the experts at the 'Environment News Service' <http://www.ens-newswire.com/> to pick their winner from the finalists chosen by the popular vote. The 'Green Log Home' website was selected as one of seven different nominees for best green educational 'product and information site' as part of the 'Green Log Home and Lifestyle Awards'. The public were given one month to vote online for their favorite site to select the finalists.

<http://www.greenloghome.com> was created with the aim of providing consumers guidance on how to build an affordable green home and how to adopt a sustainable lifestyle. Consumers can learn about green living without having to plough their way through product advertisements or clever green marketing.

Fred Ruckel, founder of the site says: "It's a great honor to be selected as best green product and informational website by popular vote. We think that it is a unique source of advice that provides free, valuable suggestions about self-sustainable living, buying land and selecting contractors. Best of all, the site doesn't try to sell you anything."

Fred's wife Natasha Ruckel adds: "We like to add environmentally friendly tips, advice and news on a daily basis, and we try to utilize the philosophy: reduce, reuse and recycle. We are also planning to include more advice relating to green technologies, from photovoltaic arrays to geothermal energy, following our experiences during the building of our green home".

Building of the Green Log Home commences at the beginning of June; consumers will be able to follow the progress of the construction process via a live web link from the homepage.

About Green Log Home Inc.

About Green Log Home Inc:

Green Log Home was established with the aim of providing consumers with non-biased information relating to: green log home building, promoting well-being in the home, creating awareness of environmental issues, and providing an overview of all aspects of green living. Green Log Home aims to dispel the myths created by the growing number of confusing and misleading 'Green-washing' campaigns, and catchy 'Green-advertisements' targeted at consumers.
