*Screaming Bee releases the Voice-Over upgrade to ScriptVOX Studio. This product provides a convenient multimedia prototyping tool for story and screenplay writers.*

PR9.NET May 20, 2008 - USA/Middleton, WI - Screaming Bee LLC is pleased to announce the release of ScriptVOX Studio with the voice-over and subtitles enhancement. This multimedia software opens a new window of creativity for writers who produce children's stories, documentaries, and screenplays. The enhancement allows users to add live vocal narrations to their stories. In addition, a subtitles feature provides an easy way to add text captions to a presentation.

"Voice-overs and subtitles will boost ScriptVOX Studio's capabilities," says Mark Ramirez, CEO of Screaming Bee. He adds, "Writers can enhance the narration in stories by recording their own voices or importing any voice talent from a file. Subtitles will make presentations and stories much more accessible to the hearing-impaired, early readers, and foreign language students."

The voice-over feature improves the audio quality of a presentation. This allows a writer to add live voices to a story either by recording directly into ScriptVOX Studio or importing audio voice files. ScriptVOX also maintains synchronization of the voices with the specific lines in a story and directly integrates to Screaming Bee's other product, MorphVOX Pro Voice Changer.

ScriptVOX Studio's subtitles feature improves accessibility by adding text captions to a story. This is important for readers who may be hearing-impaired and require text captions in place of audio. The subtitles feature is also helpful to early readers or foreign language students who can benefit from the audio output and the visual text for learning.

The storyboarding tool in ScriptVOX Studio allows writers to conveniently visualize their scripts and screenplays. Combined with ScriptVOX Studio's file rendering capabilities, a writer can also create an audio or video presentation. New video formats added to this release include high-definition (HD) DVD and YouTube settings.

ScriptVOX Studio is designed to bring stories to life. It has the ability to rapidly prototype a story, script, narration, or screenplay. Using SAPI 5.0 Text-To-Speech (TTS) and recorded voices, a writer can create a whole cast of characters for their story or presentation.

## About ScreamingBee

Based in Middleton, Wisconsin, Screaming Bee is a leading provider of voice software and solutions for online games, VoIP and multimedia applications. Screaming Bee's high-quality voice morphing technology is used in online games. Gamers can now have voices to match their in-game characters. The flagship product, MorphVOX Pro, can be used to morph an existing audio file or record a voice directly to file. Studios that use this tool can save time and potentially thousands of dollars by creating multiple voices from existing stock audio or a single voice talent. MorphVOX Pro is used by professionals in a number of fields, including education, radio broadcasting, and animation.
